Why partner with CyberSmart?

CyberSmart allows your clients to maintain compliance and makes achieving Cyber Essentials and Cyber Essentials Plus certification simple. The device-based application monitors devices for vulnerabilities, helping to deliver continuous compliance and security and offering real-time reporting and remediation through the CyberSmart dashboard.

Challenges CyberSmart solves

As the cybersecurity landscape continues to change, it can be difficult for businesses to maintain the correct levels of security and compliance. CyberSmart provides clients with an effective monitoring tool that offers complete visibility of devices, software, and compliance – reporting back every 15 minutes. This continuous monitoring and reporting method makes achieving Cyber Essentials certification quicker and easier.

Opportunities for MSPs

The government's Cyber Essentials scheme ensures basic cybersecurity measures are in place, covering the technical baseline for devices for GDPR, PCI-DSS, HIPAA, ISO27001 and others, and helping to prevent approximately 80% of cyber-attacks. Since October 2014, it has been mandatory for organisations with public or local authority contracts to have a Cyber Essentials certification. CyberSmart is designed to assist organisations in achieving certification in the easiest and shortest time possible through four straightforward steps: Identify, Fix, Certify and Protect.
