

Align to the UK Cyber Assessment Framework using Adoptech's single platform for governance, risk and compliance. Give auditors what they need faster, reduce duplicated effort across frameworks, and keep progress visible in one place.

Self-managed, built for MSPs

Platform-only is designed for MSPs that prefer to operate CAF themselves inside Adoptech. You control the cadence of delivery, the scope of evidence and the reporting, while the platform provides structure, policies and automation

Providing a centralised platform for risk, vendor and legal registers, fully bespoke policies, tasking, reminders and status reporting - Evidence repository with document generation - Cross-framework workspaces for ISO 27001 and Cyber Essentials

Risks of not aligning to CAF

- Lost opportunities. Some customers will exclude suppliers without evidenced assurance.
- Unclear risk ownership, fragmented spreadsheets and documents hide gaps.
- Inefficient audits, duplicated evidence and ad-hoc requests increase effort and cost of compliance management
- Lower resilience, missing or untested controls increase the likelihood and impact of incidents.
- Lower margins as not able to differentiate from the crowd

What is the Cyber Assessment Framework (CAF)?

The Cyber Assessment Framework is the UK's outcomes-based approach for assessing cyber resilience. It provides structured objectives and indicators of good practice that organisations use to evidence how they manage risk, protect against attack, detect events and minimise impact. Many regulated sectors reference CAF and require suppliers to demonstrate alignment.

Why MSPs should align to CAF

- Win and retain customers, more buyers now expect CAF based assurance in their supply chain.
- Standardise your service catalogue, build repeatable assessments and reporting against a recognised framework.
- Reduce risk and audit friction, clear control objectives accelerate audits and customer due diligence.
- Create cross-framework leverage, CAF controls map well to ISO27001 and Cyber Essentials, so evidence and policies can be reused.
- Build new recurring revenue streams
- Demonstrate trust and transparency to differentiate from the crowd

How Adoptech helps MSPs manage CAF

- Single pane of glass, track risks, policies, controls, tasks and audit readiness in one dashboard.
- Multi-framework workspace, run CAF alongside ISO 27001, Cyber Essentials so your work carries across, do it once then reuse across frameworks.
- Automated workflows, assign owners, due dates and reminders so nothing is missed.
- Evidence management, store artefacts once and link them to multiple controls, generate auditor friendly packs in a click.
- Continuous checks, keep status current between formal reviews so surprises do not build up.
- Scale across clients, templatised controls and documentation for consistent delivery.

Adoptech Assured badge

In order to prove you are perfectly aligned to CAF, Adoptech are also offering an annual external audit against CAF in which they will review all documentation, policies and evidence in their platform, once aligned you will get access to a CAF Assured by Adoptech badge to use, showing you've been audited against CAF.
