

Key features

- Multi-signal MDR across entire IT environments
- 24/7 SOC Analysts and Elite Threat Hunters
- Network protection from intrusions, brute force attacks and scans
- Endpoint protection against threats such as ransomware, trojans and rootkits
- Log intelligence across AWS, O365, GCP, DevOps and more
- Cloud monitoring for configurations, policies and posture
- Insider threat detection with machine learning models
- Atlas XDR platform for rapid detection and automated disruption
- Rapid, robust response with Mean Time to Contain of 15 minutes

Complete, multi-signal Managed Detection and Response that protects organisations from known and unknown cyber threats.

Why partner with eSentire?

An authority in Managed Detection and response, eSentire are pioneers in protecting critical data and applications of 1200+ organisations across the world. As cloud adoption, business applications and remote users continue to expand at fast rates. Cybersecurity teams are challenged to keep pace with growing business requirements and a growing attack surface. eSentire addresses this.

Through a combination of machine learning XDR technology, threat hunting expertise and security operations leadership, eSentire allows organisations to mitigate risk and strengthen their ability to detect, investigate and respond to cyber threats through their cutting edge technology.

Challenges eSentire solves

Protecting a modern attack surface requires visibility across multiple environments. eSentire's multi-signal Managed Detection and Response approach provides complete attack surface visibility by collecting network, endpoint, log, cloud, insider and vulnerability data.

Linking signs of compromise and early detections across multiple signals, eSentire enables deeper investigations and faster response to take place. 24/7 SOC Analysts and Elite Threat Hunters investigate, contain and enforce response actions against advanced threats that bypass traditional security measure. This multi-signal visibility enables organisations to detect and respond to threats across their entire environment.

Opportunities for MSPs

Through eSentire's multi-signal MDR service, channel partners can deliver advanced detection, investigation and response capabilities to clients.

Achieved through a combination of machine learning technology, threat hunting expertise and 24/7 security operations support, eSentire allows you to offer cutting-edge threat visibility, accelerate investigations and contain threats quickly, minimising disruption to clients' businesses.
