

A secure, centrally managed AI workspace for your clients.

Key features

- 200+ models available from one interface
- Side-by-side comparison of model outputs
- Research across the web, company files and connected data sources
- No-code builder for custom AI agents
- Workflow automation for repeatable tasks
- No training on client data, with ZDR where supported
- Context-based model selection to control spend

Why partner with nexos.ai?

nexos.ai is a single AI workspace that gives clients 200+ models, custom agents and automated workflows under central management. It lets MSPs offer secure, managed AI use and build advisory, implementation and ongoing managed services around it.

Challenges nexos.ai solves

Unmanaged AI use leaves clients with no visibility of who has access, what is being spent or where data goes. nexos.ai consolidates this into one workspace:

- One workspace replaces separate AI tools and subscriptions
- Central view of user access, permissions, usage and budgets
- Zero Data Retention on supported models, with European hosting
- Tasks routed automatically to a cost-effective model
- Integration with existing applications and data sources

Opportunities for channel partners

nexos.ai allows MSPs and IT service providers to build an AI governance and enablement service for clients and use the platform within their own business. It places partners in a strong position to advise, implement and deliver an ongoing AI service to customers.
